

Note: 4Z1 is on two contigs with a gap of unknown size between them.
 4X1 is not complete in human genomic DNA, but the gene is 30kb in rat
 AC026935.2 contig 141552-178731 has been removed from Genbank,
 but it spans the gap between 4X1 and 4Z1.

a = CYP4a exon 1 not yet named
 b = CYP4a exon 2 not yet named

CYP4ABXZ locus in human April 2, 2003 D. Nelson (based on NCBI build 30)
